

LASER EDGETAPE

Laser Edgetape from Laminex New Zealand® is an innovative adhesive-free edging technology that gives you the high impact properties of edgetape with the visual benefit of no visible glue line between the board and the edging. This new, two-layer edgeband, sourced from global leader Rehau®, is applied using a highly efficient laser or hot air edgebander that melts a colour-matched functional layer on the reverse side of the edgeband, welding it to the decorated board.

Get the high quality look of laser edgetape!
